

Class BedrockRerankingConfiguration

java.lang.Object
software.amazon.awssdk.services.bedrockagentruntime.model.BedrockRerankingConfiguration

All Implemented Interfaces:
Serializable , SdkPojo, ToCopyableBuilder<BedrockRerankingConfiguration.Builder, BedrockRerankingConfiguration>

@Generated("software.amazon.awssdk:codegen")
public final class BedrockRerankingConfiguration
extends Object
implements SdkPojo, Serializable , ToCopyableBuilder<BedrockRerankingConfiguration.Builder, BedrockRerankingConfiguration>

Contains configurations for an Amazon Bedrock reranker model.

Method Details

modelConfiguration

public final BedrockRerankingModelConfiguration modelConfiguration()

Contains configurations for a reranker model.

Returns:
Contains configurations for a reranker model.

numberOfResults

public final Integer numberOfResults()

The number of results to return after reranking.

Returns:
The number of results to return after reranking.

toBuilder

public BedrockRerankingConfiguration.Builder toBuilder()

Description copied from interface: ToCopyableBuilder

Take this object and create a builder that contains all of the current property values of this object.

Specified by:
toBuilder in interface ToCopyableBuilder<BedrockRerankingConfiguration.Builder, BedrockRerankingConfiguration>
Returns:
a builder for type T

builder

public static BedrockRerankingConfiguration.Builder builder()

serializableBuilderClass

public static Class <? extends BedrockRerankingConfiguration.Builder> serializableBuilderClass()

hashCode

public final int hashCode()

Overrides:
hashCode in class Object

equals

public final boolean equals(Object obj)

Overrides:
equals in class Object

equalsBySdkFields

public final boolean equalsBySdkFields(Object obj)

Description copied from interface: SdkPojo

Indicates whether some other object is "equal to" this one by SDK fields. An SDK field is a modeled, non-inherited field in an SdkPojo class, and is generated based on a service model.

If an SdkPojo class does not have any inherited fields, equalsBySdkFields and equals are essentially the same.

Specified by:
equalsBySdkFields in interface SdkPojo

Parameters:
obj - the object to be compared with

Returns:
true if the other object equals to this object by sdk fields, false otherwise.

toString

public final String toString()

Returns a string representation of this object. This is useful for testing and debugging. Sensitive data will be redacted from this string using a placeholder value.

Overrides:
toString in class Object

getValueForField

public final <T> Optional <T> getValueForField(String fieldName, Class <T> clazz)

sdkFields

public final List <SdkField<?>> sdkFields()

Specified by:
sdkFields in interface SdkPojo

Returns:
List of SdkField in this POJO. May be empty list but should never be null.

sdkFieldNameToField

public final Map <String ,SdkField<?>> sdkFieldNameToField()

Specified by:
sdkFieldNameToField in interface SdkPojo

Returns:
The mapping between the field name and its corresponding field.
